

THE TANK — Pitch Report

05/07/2026, 00:31:38

CareLoop AI

Asking 14 Cr for 8% equity

Problem

US regional health payers spend weeks manually reconciling claims exceptions, causing delayed reimbursements and frustrated members.

Solution

An agentic AI workflow that triages, investigates, and auto-resolves claims exceptions, escalating only the ambiguous 10% to human analysts.

Revenue Model

SaaS subscription plus per-claim processing fee

Target Audience

Mid-size US health payers and TPAs with 200k+ members

Scorecard

Market Potential: 66 / 100

Innovation: 43 / 100

Business Model: 88 / 100

Execution: 75 / 100

Investment Worthiness: 70 / 100

Q&A Transcript

Ø>Ÿˆ Victoria Cole (The Venture Capitalist) asked:

Say CareLoop AI 10x's overnight — what breaks first: the model, the ops, or the market itself?

Answer: as large volume of the workflow is resolved by agents, only infra has to be scaled for meeting the 10x growth- however with the rise in the volume the costs are to be managed

Ø>Ÿˆ Victoria Cole (The Venture Capitalist) asked:

If I write this check, what does the market look like in three years that makes this a category winner?

Answer: claims exceptions are growing increasingly owing to ambiguous policies and complex health conditions and treatment plans, this market would grow proprtional to Healthcare spend

Ø>Ÿˆ Marcus Vale (The Founder) asked:

What did you get wrong in the last six months, and what did you change because of it?

Answer: target customers and pricing. we reduced our efforts pursuing large payers owing to long sales cycles and moved from volume based pricing to transaction based pricing

Ø>Ÿˆ Marcus Vale (The Founder) asked:

Walk me through what you've actually shipped so far for CareLoop AI — not the plan, the reality.

Answer: agent that can handle the complexities for reimbursement policies with 90+% success in 2 payer environments

Ø>Ÿˆ Riya Shah (The Customer) asked:

What happens the day I stop using An agentic AI workflow that triages, investigates, and auto-resolves claims exceptions, escalating only the ambiguous 10% to human analysts.? Do I actually miss it, or do I just forget?

Answer: the workflow provides not only value in resolving cases but also speed in resolving them. so there is a difficult transition plan needed to move away from the agentic AI workflow and makes this a sticky proposition for the payers

Ø>Ÿˆ Riya Shah (The Customer) asked:

What's the one feature that makes CareLoop AI feel obviously better than doing this by hand?

Answer: speed

Ø>Ÿˆ Owen Blake (The Angel Investor) asked:

You're asking for 14 Cr. What exactly does that money buy, month by

Answer: infra required to scale, develop edge cases to improve success rate and humans required for dealing with the 10% ambiguous cases

Ø>Ÿˆ Owen Blake (The Angel Investor) asked:

If I say no today, how long does CareLoop AI survive on what you already have?

Answer: with 2 successful implementations and a current contract, whilst we use the margins to try and secure new sales along with a development roadmap for improving success rate, we have runway for 8 months

Verdict: COME BACK LATER

Promising, but not fundable yet. Hit these milestones and reapply.

Potential valuation if milestones are met: 127.50 Cr

Panel Reasoning

Ø>Ÿˆ Victoria Cole (66/100): "Fair, but I need to see the bigger version

Ø>Ÿˆ Marcus Vale (75/100): "Respect — that's a real answer, not a dod

Ø>Ÿˆ Riya Shah (43/100): "Honestly, that doesn't move me at all."

Ø>Ÿˆ Owen Blake (88/100): "That's a business, not just a nice idea."
